

# Double Speed Powerup

Joseph Barbosa

February 13, 2015

## 1 Summary

When this powerup is picked up the ability is automatically activated, doubling the player controllers velocity. This was fairly easy to implement, seeing as we only had to adjust the speed at which the player would move and this did not interfere with the physics of the game. The only trouble we experienced while creating this one is the actual computation of the speed that we needed to change, which was not a hard problem at all.
